Prevision for the end of the survey

- End of June 2011
- There are still 3 areas that require non technical survey in Bafatá region:
- Dulombi 2 (Galomaro Cosse Sector)
- Xime (Bambadinca Sector)
- Catancunda (Gã Mamudo)
- From July 2011 NPA will be carrying out only mine clearance.

PERSPECTIVES AND CHALLENGES

In according to this plan, Guinea-Bissau is in conditions to fulfill its article 5 obligations under APBT within the requested time. (end of this year).

To address all residual UXO contamination and some ammunitions storages, Government of Guinea-Bissau started administrative arrangement to transfer CAAMI within the National Service of Civil Protection (NSCP) which will start to operate in January 2012.

It's mean that NSCP will continue to follow CCW and CCM conventions.

MINE ACTION TECHNOLOGIES

Guinea Bissau, under CAAMI coordination, continues the fight against landmines using manual clearance method only, which makes clearance slow and difficult.

The capacity in place for manual clearance has been significantly reduced in the last two years, due to fund shortage. But, fortunately we start to receive some funding from our Donors and Friends (UNMAS, Germany and Australia), those funds will allow us to achieve our goal within the time frame.

MINE ACTION TECHNOLOGIES (cont.)

HUMAID, which is still operating has 55 field staff, while LUTCAM has 44. In the meantime efforts to bring to Guinea Bissau another NGO with self resources are being made. NPA is expected to conclude survey very soon, at end of this month, and to move their operations to mine clearance.

Summary of MRE 2010/2011

Number of training teachers and activists	Total number of beneficiaries for gender			Number of villages for provinces covered			Number of training section for provinces		
	M	F	C	N	S	E	N	S	E
2924	985	1567	372	14	35	5	22	9	25

***CAAMI's vision is for a Guinea-Bissau
Free of Landmines and UXO***

**Thank four your attention
We thank all our current and past stakeholders**
